

ABSTRACT OF THE DISCLOSURE

A caddy is provided for supporting a weapon such as a rifle, gun, pistol, cross bow, or long bow while hunting. The caddy serves as an adjustable cradle for supporting the weapon while aiming at a target and a safety device for transporting the weapon. The caddy may be mounted to any suitable support structure such as a tree stand, tree, hunting blind, fence, all terrain vehicle, wheelchair, or the like. In a particular embodiment, two or more caddies may be mounted on a tree stand to safely secure a weapon during set up in a tree. Each caddy may contain a safety device, such as a detachable rubber strap, for securing a weapon. When the safety device is removed, each caddy may be used as a cradle to support a weapon while aiming at a target, and the cradle may be adjusted horizontally, vertically, and/or pivotally.
